# ASSIGNMENT-2

ASSIGNMENT : **Build Python code, Generate Temperature and Humidity values (Use Random function to generate values) and write a condition to detect an alarm in case of high temperature and high Humidity**

NAME:BOOVANANTHAN L

*PROGARM*

#1 import

try:

    import configparser except:

    from six.moves import configparser

import smtplib from email.mime.multipart import

MIMEMultipart from email.mime.text import

MIMEText import requests

#2 variable related to weather API

```
weather_dict = {'freezing_rain_heavy': 'Heavy rain and snow', 'freezing_rain': 'Rain and snow',
'freezing_rain_light': 'Light rain and snow', 'freezing_drizzle': 'Light drizzle and snow',
'ice_pellets_heavy': 'Heavy ice pellets', 'ice_pellets': 'Normal ice pellets', 'ice_pellets_light': 'Light ice
pellets', 'snow_heavy': 'Heavy snow', 'snow': 'Normal snow', 'snow_light': 'Light snow', 'tstorm':
'Thunder storm', 'rain_heavy': 'Heavy rain', 'rain': 'Normal rain', 'rain_light': 'Light rain'}
url = "https://api.climacell.co/v3/weather/nowcast"
```

```python
querystring = {"lat":"1.29027","lon":"103.851959","unit_system":"si","timestep":"60","start_time":"now","fields":"temp,humidity,weather_code","apikey":"xxxx"}
